INT. J. CONTROL, 1997, VOL. 67, NO. 6, 1047–1049

SUBJECT INDEX (Vol. 67)

Adaptive dead-zone compensation for output-feedback canonical systems, 791
Adaptive decentralized control of multiple manipulators in co-operations, 649
Adaptive output-feedback control of robot manipulators using high-gain observer, 869
Algorithm
  ASMOD-type, for empirical modelling, 767
  for guaranteed stable predictive control with low input activity and good robustness, cautious stable predictive control, 675
  mean-tracking clustering type, for radial basis function centre selection, 961
Algorithms for periodic Lyapunov equations, 69
Anaethesia, constrained multivariable generalized predictive control, quadratic-programming approach, 507
ARMA controllers in continuous-time feedback schemes, 641
ASMOD algorithm for empirical modelling, 767

Bilinear systems, state observation, failure detection, isolation, 901

Canonical systems, output-feedback type, adaptive dead-zone compensation, 791
Cautious stable predictive control, guaranteed stable predictive control algorithm with low input activity and good robustness, 675
Compensation, adaptive output feedback dead-zone type, for canonical systems, 791
Compensators for linear systems with independent amplitude and rate saturations, 89
Computation of maximal robust $\mathscr{H}_2$ performance radius for uncertain discrete-time systems with nonlinear parametric uncertainties, 33
Computational delay effects on descriptor-based trajectory tracking control, 251
Computer-controlled continuous-time variable structure systems with sliding modes, 619
Conservative systems, exact controllability, Hautus condition, 371
Continuous-time feedback schemes, ARMA controllers, 641
Continuous-time variable structure systems with sliding modes, computer-controlled, 619
Control
  H_2/H_∞-nonlinear, for robust tracking design of robotic systems, 837
  H_2-type, robust, discrete-time, 213
  adaptive output-feedback type, of robot manipulators using high-gain observer, 869
  computer-controlled continuous-time variable structure systems with sliding modes, 619
  decentralized, adaptive, of multiple manipulators in co-operations, 649
  descriptor-based trajectory tracking type, effects of computational delay, 251
  digital, robust, using multi-rate input sampling, 813
  direct, optimal, hybrid approach, 193
  discrete-time adaptive sliding mode type, of linear system in state-space form, 859
  of disc
  of induction motors, robust, adaptive, 539
  of sequential machines with disturbances, 307
  of two plants, simultaneous, deadbeat tracking type, 921
  optimal, for convergence of class of discrete event systems, 1029
  optimal anti-windup-type, of saturating discrete-time MIMO systems, 933
  PI feedback type, around a delay element, Riemann representation, 1021
  predictive
    generalized
      multivariable, constrained, for anaesthesia, quadratic programming approach, 507
      stable, robust, 411
    stable, cautious, algorithm with low input activity, 675
  state feedback type, of discrete-event systems, M-controllable subpredicates, 553
  structure, stable, for binary distillation columns, 475
Controllability, exact, of conservative systems, Hautus condition, 371
Controllers
  ARMA type, in continous-time feedback schemes, 641
  H^∞-type, for pure delay and other distributed systems, 355
  stabilizing, for interconnected systems, 45

Dead-zone compensation, adaptive, for output-feedback canonical systems, 791
Deadbeat tracking simultaneous control of two plants, 921
Decentralized adaptive control of multiple manipulators in co-operations, 649
Descriptor-based trajectory tracking control, effects of computational delay, 251
Design
  of H^∞ controllers, for pure delay and other distributed systems, 355
  of observer, for nonlinear descriptor systems, 153
  of robotic systems robust tracking using nonlinear mixed H_2/H_∞ control, 837

Design—*contd*
of stable systems with uncertainties and constrained performance variations, 23
Detection and estimation of abrupt changes in input or state, 699
Detection and observer design for nonlinear descriptor systems, 153
Digital robust control using multi-rate input sampling, 813
Discrete critical systems with specifications in the frequency domain, robust control, 169
Discrete-event systems, M-controllable subpredicates arising in state feedback control, 553
Discrete event systems class, optimal convergence control, 1029
Discrete systems with complex coefficients in a diamond, robust stability, extreme point result, 529
Discrete-time adaptive sliding mode control of a linear system in state-space form, 859
Discrete-time processes, nonlinear, robust H_∞-estimation, 603
Discrete-time systems, quadratic forms and approximate feedback linearization, 567
Distillation columns, binary, stable control structure, 475
Distributed systems, H^∞ controller-design, 355
Dynamical systems family, with non-standard chaotic and periodic behaviour, topological analysis, 979

Eigenstructure perturbation analysis in disjointed domains for linear uncertain systems, 887
Estimation and detection of abrupt changes in input or state, 699
Exact-output tracking theory for systems with parameter jumps, 117
Extreme point result for robust stability of discrete systems with complex coefficients in a diamond, 529

Failure detection, isolation, state observation, in bilinear systems, 901
Feedback systems with non-minimum-phase plants, gain–bandwidth limitations, 731

Gain–bandwidth limitations of feedback systems with non-minimum-phase plants, 731

$\mathscr{H}_2$ performance radius, maximal, robust, for uncertain discrete-time systems with nonlinear parametric uncertainties, computation, 33
$\mathscr{H}_\infty$ control problems, constantly scaled, LMI approach to local optimization, 233
H_∞-estimation, robust, of nonlinear discrete-time processes, 603
H^∞ controller design for pure delay and other distributed systems, 355
H_2/H_∞ control, nonlinear, mixed, for robust tracking design of robotic systems, 837
H_2/H_∞ problems, approximate solutions via sequences of H_2-cost/H_2-constraint optimization problems, 333
H_2 control, robust, discrete-time, 213
Hautus condition on the exact controllability of conservative systems, 371

Identification, parameter bounding type, for state-space systems, 745

Linear system, state-space form, discrete-time adaptive sliding mode control, 859
Linear systems with independent amplitude and rate saturations, dynamic output feedback compensation, 89
Lyapunov equations, periodic, some applications and new algorithms, 69

Machines
sequential, with disturbances, control, 307
multiple, in co-operations, decentralized adaptive control, 649
Modelling, empirical, using ASMOD algorithm, 767
Motors, induction type, robust adaptive control, 539
Multivariable generalized predictive control, constrained, for anaesthesia, quadratic-programming approach, 507

Neural approximators for nonlinear finite-memory state estimation, 275
Nonlinear discrete-time processes, robust H_∞-estimation, 603
Nonlinear system, output frequencies, 713
Nonlinear systems class, stabilization through Lyapunov function decomposition, 381
Nonlinear systems, robust tracking, sufficient conditions, 825
sampled-data representations obtained via Taylor–Lie series, system-theoretic properties, 997

Observation of state, failure detecture, isolation, in bilinear systems, 901
Observer design and detection for nonlinear descriptor systems, 153
Optimal anti-windup control of saturating discrete-time MIMO systems, 933
Optimal control
direct, hybrid approach, 193
for convergence of class of discrete event systems, 1029
Optimization, local, for constantly scaled $\mathscr{H}_\infty$ control problems, LMI approach, 233
Optimization problems, global, stochastic modification, applied to vulcanization, 1
Output feedback compensation, dynamic, for linear systems with independent amplitude and rate saturations, 89

Parameter bounding identification for state-space systems, 745
Parameter jump systems, exact-output tracking theory, 117
PI feedback control around a delay element, Riemann representation, 1021
Pole assignment, by state feedback, singular systems, general framework, 135
Predictive control, robust, stable, generalized, 411

Quadratic forms and approximate feedback linearization in discrete time, 567

Radial basis function centre selection using mean-tracking clustering algorithm, 961
Regulation, robust, deadbeat, 587
Riemann representation for a PI feedback control around a delay element, 1021
Robot manipulators, adaptive output feedback control using high-gain observer, 869
Robotic systems, robust-tracking design using nonlinear mixed H_2/H_∞ control, 837
Robust H_∞-estimation of nonlinear discrete-time processes, 603
Robust adaptive control of induction motors, 539
Robust control of discrete critical systems with μ-specifications in the frequency domain, 169
Robust deadbeat regulation, 587
Robust digital control using multi-rate input sampling, 813
Robust discrete-time H_2 control, 213
Robust stable generalized predictive control, 411
Robust tracking in nonlinear systems, sufficient conditions, 825

Sampled-data representations of nonlinear systems obtained via Taylor–Lie series, system-theoretic properties, 997
Sampled data systems, normalized coprime factorizations, 455
Sampling period effect on behaviour of systems incorporating state feedback, 303
Saturating discrete-time MIMO systems, optimal anti-windup control, 933
Singular systems, general framework for state feedback pole assignment, 135
Singularly perturbed systems, constrained stabilization problem and transient mismatch phenomenon, 435
Sliding mode computer-controlled continuous-time variable structure systems, 619
Stability, robust, of discrete systems with complex coefficients in a diamond, extreme point result 529
Stabilization
  of a class of nonlinear systems through Lyapunov function decomposition, 381
  problem, constrained, and transient mismatch phenomenon in singularly perturbed systems, 435
Stabilizing controllers for interconnected systems, 45
Stable systems with uncertainties and constrained performance variations, design, 23
State estimation, nonlinear, finite-memory, using neural approximations, 275
State feedback systems behaviour, sampling period effect, 303
State observation, failure detection and isolation in bilinear systems, 901
State-space systems, parameter bounding identification, 745
Step changes in state of linear discrete-time dynamical system, detection and estimation, 699
Stochastic modification for global optimization problems, efficient implementation for control of vulcanization, 1
System-theoretic properties of sampled-data representations of nonlinear systems obtained via Taylor–Lie series, 997

Topological analysis of family of dynamical systems with non-standard chaotic and periodic behaviour, 979
Tracking
  of exact output, for systems with parameter jumps, 117
  robust, in nonlinear systems, sufficient conditions, 825
Two plants, simultaneous deadbeat tracking control, 921

Uncertain linear systems, eigenstructure perturbation analysis in disjointed domains, 887

Variable structure continuous-time systems with sliding modes, computer-controlled, 619
Vulcanization, application of stochastic modification for global optimization problems, 1
